

License Asset Manager™ Justification

With License Asset Manager you can:

- Track all shared and standalone licenses. Knowing where all licenses are and who is using them is a good first step.
- Show your actual Current checkouts, who has the license, how long it has been checked out, and if someone is “camping” (checked out but not in use) on a license, you can send them a “Warning” email
- Create “read-only” portals for Engineers to see current checkout status of certain Licenses, how many are available,...
- Show your historical usage by License, by User, by Site, for any time period. With that information you can see how often Max checkouts have occurred, Trends, and again use that for making decisions
- Show Concurrent usage stats as a % of time
- Monitor all license servers and daemon, and know immediately if a server or daemon goes down.....
Daemon-down Alerts
- Long-checkout and Capacity-threshold Alerts
- Expiration Alerts, via email, far enough in advance, will allow you to renew Licenses without service interruption. You don’t want license keys shutting down in the middle of a project. With more advanced warning, you can better plan Vendor negotiation strategy.
- Save 15-20% of annual License costs. **This is a big reason!!!!**
- Create chargeback reports by User or Group (for License utilization)
- Be prepared for an internal or external audit for Licensing Compliance. Be able to show PO, cost, contracts, Time periods,.... And associated documents for each Vendor.

So what makes License Asset Manager™ so good:

- Intranet, web-based, shared and protected solution. The solution is based on an industry standard Windows Server platform, SQL database, Apache, and Java.
- Easy to install and use (intuitive)
- Import via Excel spreadsheet
- Complete Vendor and Reseller information, including Contacts and Contracts
- Complete License Inventory
 - Shared License Asset tracking
 - Node-locked License Asset tracking
- Full Tool/Product information, including Part#, Discipline, and Price
- Extensive License Inventory reporting
- Extensive Utilization reporting
- Viewing portals for casual Users (save URL as a “Favorite”)
- Long-checkout Alerts and/or Warning letters
- Capacity-limit Alerts
- Daemon/Server down Alerts
- Expiration alerts (for Renewals and license key features)
- Access via any Windows browser or iPad
- Auto-refresh of “Current Checkout” page (show real-time status!)

Sample "License Asset Manager" reports

All License Inventory (User configurable view)

The screenshot displays the License Asset Manager web application in Internet Explorer. The page title is "License Asset Manager" and the release version is 6.0.0. The date shown is Jul 3, 2013. The interface includes a navigation menu with tabs for Alerts, PO, Licenses, Usage, Vendors, Tools, Servers, Reports, and Settings. The "Licenses" tab is active, showing a table of license inventory with 14 items. The table columns are Vendor, Tool, PO, Quantity, Site, Restrict, Purchase Type, Expiry Date, Responsible Person, and Actions. The table data is as follows:

Vendor	Tool	PO	Quantity	Site	Restrict	Purchase Type	Expiry Date	Responsible Person	Actions
Abaqus	Abaqus Bundle	12345	1	Boston	WAN-US	Subscription	Apr-15-2014		Edit <input type="checkbox"/>
